

SURFACE CURE P

DESCRIPTION

SURFACE CURE P is a water-based curing compound designed for use on freshly poured and screeded concrete, to reduce the evaporation of water, thereby improving the curing process.

SURFACE CURE P does NOT pass AS3799, but is a Type B curing compound, based on a polyvinyl acetate polymer, containing no waxes, paraffin waxes or oils and will not normally interfere with subsequent toppings, tiling, render, surface coatings etc. often used in industry.

SURFACE CURE P is not considered to be a hazardous product and will degrade to a powder after exposure to sunlight within 6-8 weeks.

SURFACE PREPARATION

Minimal surface preparation required.

Apply at the low sheen drying cycle after screeding and finishing.

DIRECTIONS

Apply "neat" using a low-pressure backpack type spray, applying "north-south"; then "east-west" .

COVERAGE

5-10m²/L.

CLEAN UP

Use water prior to the membrane curing or use methylated spirit and water, 50/50; apply generously and scrub in.

Flush with water.

STORAGE

Store in a cool dry place away from heat.

Do not freeze.

SAFETY

Product is not flammable, nor classed as dangerous.

Refer to Material Safety Data Sheet.

PACKS

20L, 200L

SURFACE CURE P - PDS Sept 2020

This Product Data Sheet (PDS) summarises our best knowledge of the product, including how to use and apply the product based on the information available at the time. You should read this PDS carefully and consider the information in the context of how the product will be used, including in conjunction with any other product and the type of surfaces to, and the manner in which, the product will be applied. Our responsibility for products sold is subject to our standard terms and conditions of sale. Chemical House does not accept any liability either directly or indirectly for any losses suffered in connection with the use or application of the product whether in accordance with any advice, specification, recommendation, or information given by it.
